Fund facts

Risk level					Total net assets	Expense ratio as of 12/22/23	Ticker symbol	Turnover rate	Inception date	Fund number
Low <-----> High										
1	2	3	4	5	\$2,334 MM	0.07%	VRNIX	8.4%	10/15/10	1848

Investment objective

Vanguard Russell 1000 Index Fund seeks to track the performance of a benchmark index that measures the investment return of large-capitalization stocks.

Investment strategy

The fund employs a “passive management”—or indexing—investment approach designed to track the performance of the Russell 1000 Index. The index measures the performance of large-capitalization stocks in the United States. The fund attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index.

Benchmark

Russell 1000 Index

Growth of a \$10,000 investment : January 31, 2014—December 31, 2023

Annual returns

Total returns

Periods ended September 30, 2024						
	Quarter	Year to date	One year	Three years	Five years	Ten years
Fund	6.06%	21.12%	35.63%	10.77%	15.59%	13.02%
Benchmark	6.08%	21.18%	35.68%	10.83%	15.64%	13.10%

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at [vanguard.com/performance](https://www.vanguard.com/performance). The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index. Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. All returns are net of expenses.

Plain talk about risk

An investment in the fund could lose money over short or even long periods. You should expect the fund's share price and total return to fluctuate within a wide range, like the fluctuations of the overall stock market. The fund's performance could be hurt by:

Stock market risk: The chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising stock prices and periods of falling stock prices. The fund's target index may, at times, become focused in stocks of a particular sector, category, or group of companies. Because the fund seeks to track its target index, the fund may underperform the overall stock market.

Investment style risk: The chance that returns from large-capitalization stocks will trail returns from the overall stock market. Large-cap stocks tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years.

Sector risk: The chance that significant problems will affect a particular sector, or that returns from that sector will trail returns from the overall stock market. Daily fluctuations in specific market sectors are often more extreme or volatile than fluctuations in the overall market. Because a significant portion of the fund's assets are in the information technology sector, the fund's performance is impacted by the general condition of that sector. Companies in the information technology sector could be affected by, among other things, overall economic conditions, short product cycles, rapid obsolescence of products, competition, and government regulation.

Nondiversification risk: Because the fund seeks to closely track the composition of the fund's target index, from time to time, more than 25% of the fund's total assets may be invested in issuers representing more than 5% of the fund's total assets due to an index rebalance or market movement, which would result in the fund being nondiversified under the Investment Company Act of 1940. The fund's performance may be hurt disproportionately by the poor performance of relatively few stocks, or even a single stock, and the fund's shares may experience significant fluctuations in value.
